**Predictive Services Discussion:** Westerly flow aloft will continue for the northern Intermountain West north of high pressure over the Great Basin as an upper low moves from New Mexico into Arizona. A decaying cold front will bring breezy winds with low relative humidity to portions of the northern Great Basin, and typical dry and breezy gap winds will develop on the east side of the Cascades and Sierra Front. Minnesota will also have post-frontal breezy northwest winds and relative humidity in the teens. Very dry conditions will continue for the northern Intermountain West, including poor overnight recovery for mid-slopes and ridges. Isolated mixed wet and dry thunderstorms are possible for southeast California and Wyoming, while monsoonal thunderstorms continue for much of the Southwest and broader Four Corners region. The potential for flash flooding will remain elevated over Arizona into western New Mexico. Severe thunderstorms are likely along and ahead of a cold front in the Great Lakes with severe outflow winds also possible in northern Arizona.

## On a Hillside Where Rolling Material Can Ignite Fuel Below

*Operational Engagement Category*

When firefighters find themselves in Watch Out Situation #13, on a hillside where rolling material can ignite fuel below, they must answer the following questions:

- Can you locate/construct a line to prevent material from rolling below? What do you call line that catches rolling material?
  - Describe how you would construct this type of line and what factors you would have to consider (e.g., slope, fuels, etc.).
- Will you get enough warning of rolling material to prevent being hit by it? Who needs to be watching for rolling material? What kinds of warning systems could you establish?
- Can you see where any material that rolls below you goes and what it does? What can happen when material rolls out of the fire and below you, out of view? What needs to be done to mitigate this danger?
- Is the area free of large amounts of flashy fuels? Is the area free of chimneys, gullies, and steep slopes?
  - Review the [Common Denominators of Tragedy Fires](#).
- Do you have two escape routes so you can go either way? Talk about where your most likely escape routes and safety zones will be when you are on a hillside where rolling material can ignite fuel below.
- To reduce the risks:
  - Post lookouts.
  - Consider locating line in a defensible position.
  - Talk about fires in steep terrain where you had material roll out below you and how you dealt with it.
